Add an ID to a Woocommerce Product

On the product's editing page, scroll down to the **Product data** section. Select the **Inventory** section and enter in the ID of your choice in the Stock Keeping Unit (SKU) field.

A screenshot of the WooCommerce product editing interface. At the top, the "Product data" section is expanded to show "Simple product" as the selected type. To the right of this are checkboxes for "Virtual" and "Downloadable". Below this is a sidebar with four tabs: "General", "Inventory", "Product label", and "Shipping". The "Inventory" tab is selected and highlighted. A blue arrow points from the "Inventory" tab to the "SKU" field. The "SKU" field is an empty text input box. Below it is a "Stock status" dropdown menu currently set to "In stock". At the bottom, there is a "Sold individually" checkbox and a checkbox labeled "Enable this to only allow one of this item to be purchased at a time".
