

Add categories in Woocommerce

There are two ways to add categories in Woocommerce. The first way is to go to the category section by going to **Products – Categories**.

In the following section it's self-explanatory. Once done creating your category, you can add a product to that category by going to **Products** section.

Select the product that you want to add to your category. On the right-hand side of the product's page, you will see a section for categories. Here you can check the boxes of the categories you want your product to be associated with.

There is also a link **+Add new category**. This is our second way to add a category. This way is convenient if you don't need to do much configuration.
